## DETAILED ACTION

### *Election/Restrictions*

Claims 1-93 are generic to a plurality of disclosed patentably distinct species comprising (a) different diseases (b) different species of augmenting agents. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Claims 1-93 as presented contain such a vast multitude of possibilities of augmenting agents which enhance CREB pathway function and vast array of different disorders that the search for each and every species of augmenting agents which enhance CREB pathway function and every disorders encompassed in the claims thereof presents an undue burden on the office. Accordingly, a requirement to provisionally elect a single independent and patentably distinct species is made as provided for in MPEP 803.02. These species are considered to be distinct inventions since the species are so diverse and unrelated structurally that a reference anticipating one of the species would not anticipate or render obvious the other species. Thus, the stated species are capable of supporting separate patents.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, **one specific** augmenting agent which enhances CREB pathway function and one specific disorder, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the

examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
